PROFESSIONAL SUMMARY

Accomplished automation expert and full-stack developer with extensive experience in blockchain technologies. Specializes in creating high-performance, scalable applications and automated workflows that optimize business processes. Proven expertise in developing real-time data systems, AI integrations, and secure payment solutions. Passionate about leveraging cutting-edge technologies to deliver innovative solutions that drive business growth.

TECHNICAL SKILLS

Languages & Frameworks:

Rust JavaScript TypeScript Python React Node.js Next.js Vue.js Flutter
Laravel Django FastAPI Express

Blockchain:

Solidity Web3.js Smart Contracts NFT Development Ethereum TitanX

Automation & Integration:

Make.com (Integromat) Zapier HubSpot API Twilio API OpenAI API Anthropic API
Webhook Integration

Data & Backend:

MongoDB PostgreSQL MySQL GraphQL REST API Firebase Serverpod

DevOps & Tools:

Docker Git CI/CD AWS Puppeteer Cheerio Axios

UI/UX:

TailwindCSS Material UI Responsive Design Vite

PROFESSIONAL EXPERIENCE

Lead Automation Developer

2021 - Present

Freelance

Key Projects:

HubSpot Integration Automation

- Developed a comprehensive marketing ecosystem connecting MailChimp and HubSpot CRM
- Implemented intelligent contact management with bi-directional data synchronization
- Built configurable router systems for automated lead distribution
- Created trigger-based automation for contact management operations

Technologies: Make.com, HubSpot API, MailChimp API, Router Middleware, Webhook Integration

Multi-Platform Workflow Integration

- Orchestrated complex business processes across multiple services
- Implemented conditional branching logic with multiple execution paths
- Designed data transformation pipelines for cross-platform compatibility
- Created document generation and storage automation
- Built Slack notification system for real-time alerts

Technologies: Make.com, APIs, Slack, Calculator Engine, Google Sheets, Document Storage

Data Pipeline Workflow Automation

- Developed end-to-end ETL pipeline for processing multi-dimensional data
- Created custom JavaScript modules for complex data manipulation
- Implemented modular architecture with reusable components
- Built automated data validation with quality assurance checks

Technologies: Workflow Automation Platform, JavaScript, ETL Tools, API Integration, Webhook Triggers

WhatsApp AI Coaching Integration

- Designed webhook-based system for WhatsApp message processing
- Integrated OpenAI with conversation history management
- Implemented privacy-focused design with selective metrics collection
- Created analytics dashboard for engagement monitoring

Technologies: Zapier, Twilio WhatsApp API, OpenAI API, JavaScript, Webhook Integration

Blockchain Developer

2020 - Present

Various Projects

Celebrity Link – PR & Social Media Growth

- Developed a celebrity PR & media platform with secure payment processing
- Built responsive UI with Next.js & TailwindCSS
- Integrated subscription management via Stripe

Technologies: Next.js, Django, Stripe, TailwindCSS, Docker

VOLT.WIN – Blockchain Auction Platform

- Created a blockchain-powered auction system with smart contract integration
- Developed React-based frontend for seamless user experience
- Implemented TitanX blockchain integration for secure transactions

Technologies: React, FastAPI, MongoDB, Web3.js, TitanX Blockchain

NFT Development & Marketplace Integration

- Built multiple NFT platforms including minting websites and marketplaces
- Implemented Ethereum-based smart contracts for digital collectibles
- Created secure authentication and transaction systems

Technologies: Solidity, React, Node.js, Blockchain, Web3.js

Full Stack Developer

2019 - Present

Web & Mobile Applications

Betwatch Site Scraping – Real-Time Data Automation

- Designed real-time data scraper for automated sports data collection
- Integrated GraphQL & RESTful APIs for smooth data retrieval
- Built Google Sheets API sync for live updates

Technologies: Python, GraphQL, MongoDB, Google Sheets API

AI-Powered Content Generation

- Created AI-driven platform for generating articles, posts, and letters
- Integrated OpenAI & Anthropic APIs for advanced text generation
- Built scalable FastAPI backend for optimal performance

Technologies: React, FastAPI, MongoDB, OpenAI API, Anthropic API

Roasted Revolution – E-Commerce Coffee Store

- Designed modern & responsive coffee e-commerce platform
- Implemented secure payment processing with Stripe & PayPal
- Built custom Laravel admin panel for product & order management

Technologies: Laravel, Vue 3, Vite, Tailwind CSS, MySQL

TradeLog – Flutter-Based Trade Logging System

- Developed multi-platform trading application for iOS, Android, and Web
- Implemented real-time trade logging with performance analytics
- Created secure authentication and data synchronization

Technologies: Flutter, Serverpod, PostgreSQL, Firebase, Riverpod, Dio

EDUCATION

Bachelor of Science in Computer Science

University of Technology

2015 - 2019

CERTIFICATIONS

AWS Certified Developer – Associate

Professional Scrum Master I (PSM I)

Google Cloud Professional Developer

MongoDB Certified Developer

INTERESTS

Algorithm Optimization

Blockchain Innovation

Process Automation

Machine Learning
